

Verti-Crete Wall System

Exclusively offered by:

Norwalk Concrete Industries

• Quality Precast Products Since 1906 •

The Verti-Crete Precast Concrete Wall System enhances your project with a highly distinctive and beautiful appearance at significantly less cost than stone or brick masonry. Produced with high-strength precast concrete, our panels and columns are designed for long-term service. Whether commercial or residential, public or private, the Verti-Crete System provides lasting beauty and performance as a privacy, security or decorative wall.

Verti-Crete utilizes nature's own materials to create a natural stone finish while offering considerable flexibility. Each component is precision molded to achieve the greatest definition of texture on all sides, creating the visual impact of natural stone.

Design flexibility provides compatibility with a variety of architectural styles. The columns can be incorporated with other fencing materials such as vinyl and wrought iron. Other applications include decorative mailboxes, street lighting bases, signage and monuments.
